

Forklift Fork Positioners

Forklift Fork Positioner - A fork positioner is actually a device constructed out of top quality materials intended to be able to withstand the most demanding procedures and work environments. This piece of equipment could enable drivers to operate the forks hydraulically without leaving the seat. Side shifting models have the added ability to be able to laterally position the entire load or the arms so as to facilitate much more accurate carrying and placement in a faster and more efficient method.

The blade pocket is quite unique and can enable the individual operating it to safely swing the forks into position without any worry of damaging the positioning cylinders. This allows the operator the choice to perform independent or simultaneous fork movement, depending on the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages can be transformed into fork positioners on available units.
